

Computer Engineering Department

Course name: Web Technologies

Course code: 2CP08

Faculty: Prof Kirtikumar Sharma

ID: 23CP029

Name: Viral Vipulkumar Bhoi

Topic: Report of LAB - 9

LAB 9: PHP-1 Introduction and basic syntax.

Echo, Data Types, Decision and looping with examples, PHP and HTML, Arrays

TABLE OF CONTENT:

9.1 Brief introduction of PHP	3
9.2 HTML AND PHP	4
9.3 OUTPUT	7

9.1 Brief introduction of PHP::

1. PHP

- PHP (Hypertext Preprocessor) is a widely-used server-side scripting language.
- It Used to make dynamic webpages as well as TO join databases.

2. Basic PHP Syntax

- *Php code is written inside php tag :*
- `<?php ... ?>`.
- *PHP statements end with a “;”.*

3. Comments

- `//` single line comments
- `/*` Multi-line
comment `*/`.

4. Echo

- It is used to output text or variables

5. Data Types in PHP

- *A variable in php starts with \$.*
- PHP supports : string , integer, float, Boolean, array, object, NULL.

6. Arrays in PHP

- 3 Types:
 - Indexed Arrays
 - Associative Arrays
 - Multidimensional Arrays

9.2 PHP AND HTML.

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>php</title>

</head>

<body>

    <h1> This is a PHP file </h1>

    <?php

        echo "<h3>This is a echo word</h3>". "<br>";

        //single line

        /* multi
        line comment
        */

        $name = "Viral";

        $age = 19;

        $cgpa = 8.33;

        $isIndian = true;

        $subLearn = ["WT", "Coa", "CN"];

        echo "name : ".$name."<br>";

        var_dump($name);

        echo "<br>";

        echo "age : ".$age."<br>";
```

```

var_dump($age);
echo "<br>";
echo "CGPA : ".$cgpa."<br>";
var_dump($cgpa);
echo "<br>";
echo "Indian : ".$isIndian."<br>";
var_dump($isIndian);
echo "<br>";

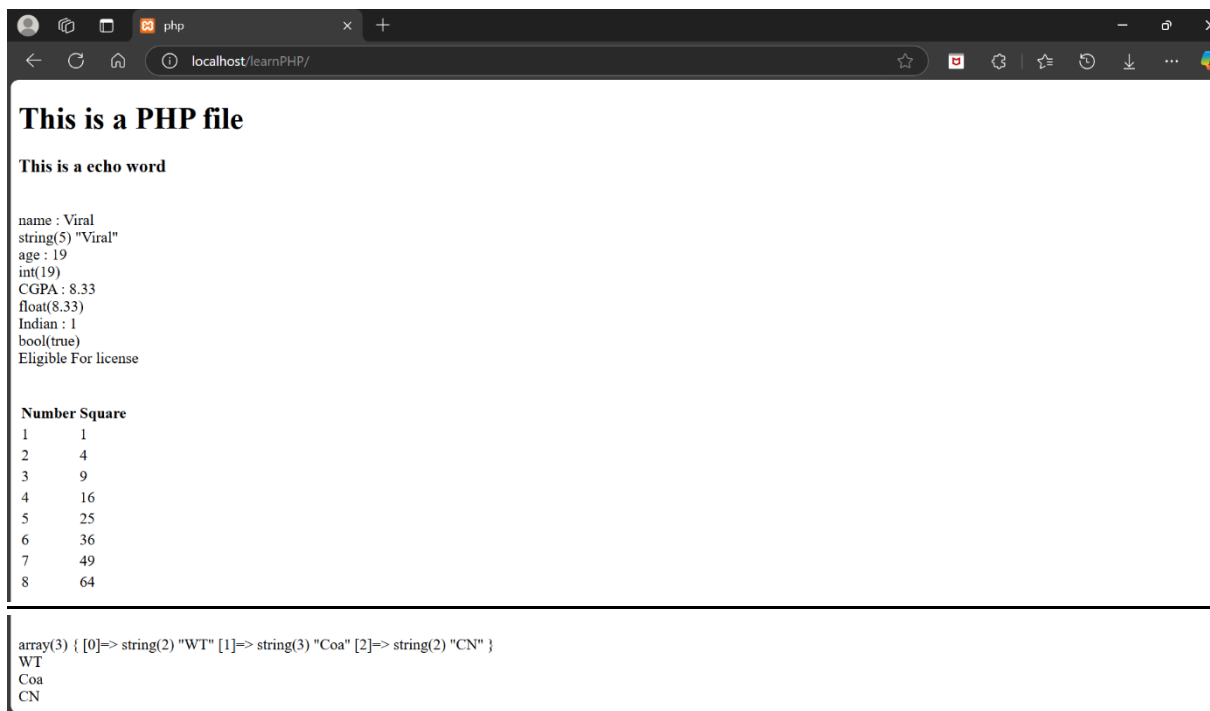

if($age > 18){
    echo "Eligible For license <br>";
}else{
    echo "Minor <br>";
}
?>

<br>
<br>
<table>
    <tr>
        <th>Number</th>
        <th> Square </th>
    </tr>
<?php
    for($i = 1; $i<= 5; $i++){
        echo "<tr><td>". $i."</td> <td>". $i * $i."</td> </tr>";
    }
    $i = 6;
    while($i < 9){
        echo "<tr><td>". $i."</td> <td>". $i * $i."</td> </tr>";
        $i++;
    }
}

```

```
        }  
    ?>  
</table>  
  
<br>  
<br>  
  
<?php  
    var_dump($subLearn);  
    echo "<br>";  
    foreach ($subLearn as $sub) {  
        echo $sub."<br>";  
    }  
    ?>  
</body>  
</html>
```

9.2 OUTPUT.

A screenshot of a web browser window displaying the output of a PHP script. The browser's address bar shows 'localhost/learnPHP/'. The page content includes a title, a heading, a paragraph, a list of variables with their types and values, a table of squares, and an array with its elements.

```
This is a PHP file  
  
This is a echo word  
  
name : Viral  
string(5) "Viral"  
age : 19  
int(19)  
CGPA : 8.33  
float(8.33)  
Indian : 1  
bool(true)  
Eligible For license  
  
Number Square  
1      1  
2      4  
3      9  
4      16  
5      25  
6      36  
7      49  
8      64  
  
array(3) { [0]=> string(2) "WT" [1]=> string(3) "Coa" [2]=> string(2) "CN" }  
WT  
Coa  
CN
```
